

Furina Truck Bodies

“FLEET PLUS CUSTOM Refrigerated Truck Body”

Australian Made For Australian Conditions

Our team at Furina Truck Bodies have been working hard to design the **Toughest** and most **Thermally efficient** body in Australia, with an extensive range of options. We have a truck body that will give you many years of trouble free service. We have used our extensive experience in the truck repair industry to eliminate common failure areas. Our ethos “fit for purpose, designed for life”. With uncompromising quality, we strive to innovate and improve.

We have worked hard to keep this body as light as we can without compromising strength. A key feature of our design is there is nothing within the truck to absorb and store water. This ensures the weight will stay the same for the life of the truck.

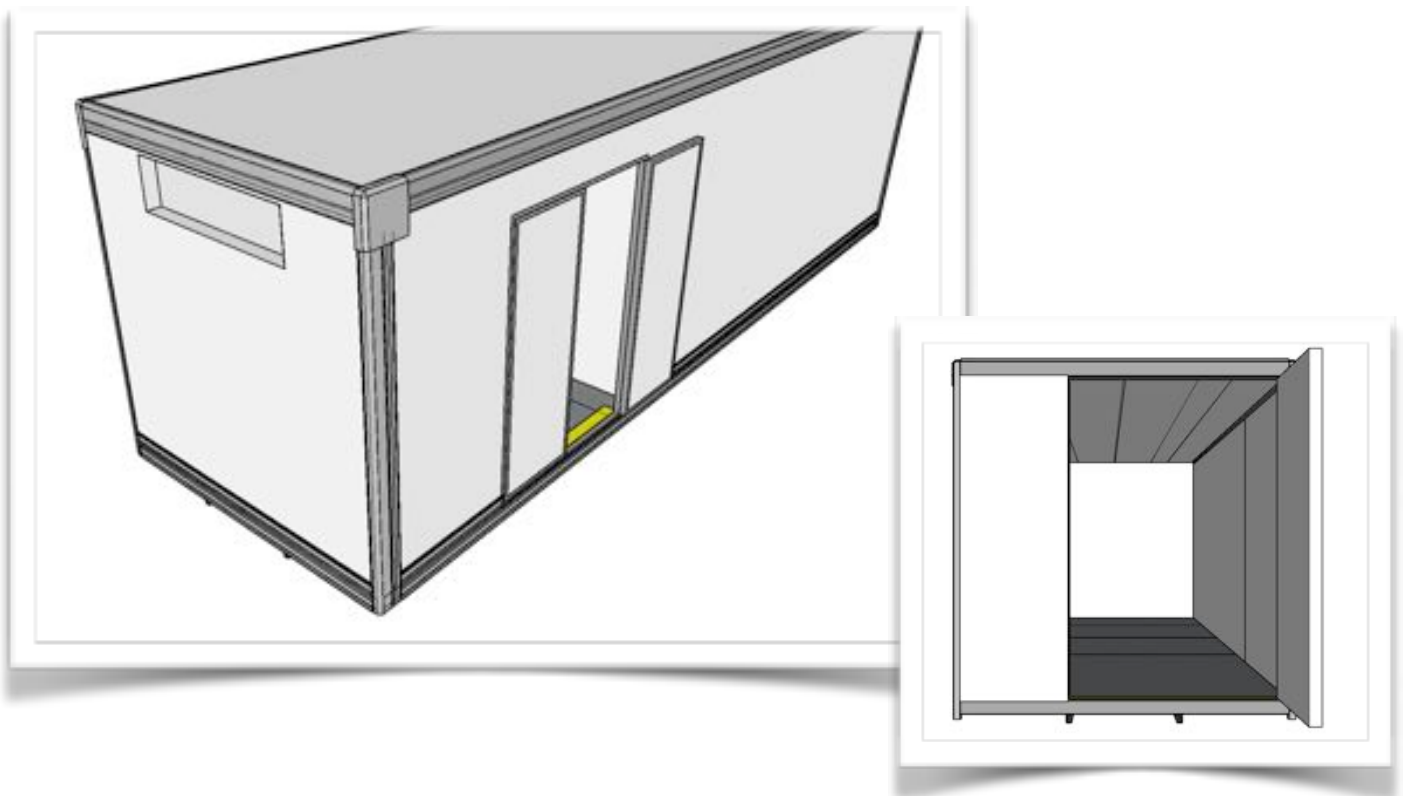

Computer Aided Design

The secret to our success is our custom designed refrigeration panels.

These are made to order on site, by our supply partner Superior Composites. This gives us the ability to adapt quickly to your needs. We can design a body to suit your size requirements with no effect on supply times.

Computer Aided Design

Each body we build is designed on our 3D CAD software first. This means you are able to see your body in the virtual world before we built it in the physical world. Ensuring the body you want is the body you get.

Exclusive Features Include

Tilt and slide drop wall.

Opens for easy pallet loading and slides for flexible temperature zoning.

Single or Double Side Doors

Custom sizes to suit your

Internal Emergency Release Handles

Silicon Carbide Non Slip Floor

- Safe non slip surface
- Easy to clean

Full Stainless Steel Structural Rear Frame

Fleet Plus Custom Side Steps

- Microswitch Protected
- One Handed Operation
- Self Locking

“This body is **TOUGH**. I reckon it will last the life of the truck and beyond”

“This body is **EFFICIENT**. They are the first to pull temperature, the first to get loaded and the first on the road. And the fridges burn **LESS FUEL**”

“The guys haven’t Broken it yet. We’ll keep trying and let you know”
